

# *Navier-Stokes Solutions at Large Distances from a Finite Body\**

I-DEE CHANG\*\*

*Communicated by T. Y. THOMAS*

## TABLE OF CONTENTS

Chapter	Page
LIST OF SYMBOLS . . . . .	812
I. INTRODUCTION . . . . .	814
II. COORDINATE- AND PARAMETER-TYPE EXPANSIONS	
2.1. Coordinates <i>vs.</i> parameters . . . . .	816
2.2. Parameter-type expansion. Singular perturbation problems and matching . . . . .	818
2.3. Coordinate type expansions . . . . .	819
2.4. Artificial parameters . . . . .	820
2.5. Expansion in an artificial parameter. . . . .	822
III. SOME PROPERTIES OF THE NAVIER-STOKES EQUATIONS AND OSEEN EQUATIONS	
3.1. NAVIER-STOKES equations. Vorticity equations . . . . .	825
3.2. Parameters. Non-dimensional equations . . . . .	827
3.3. Divergence relations. Integral theorems . . . . .	827
3.4. Integrals of divergence-free tensors . . . . .	830
3.5. The rapid (non-algebraic) decay of vorticity . . . . .	833
3.6. The OSEEN equations . . . . .	834

---

\* This paper is an extension and revision of the author's dissertation presented to the California Institute of Technology in June 1959. The author is deeply grateful to his research supervisor Professor P. A. LAGERSTROM for suggesting the topic and for his close guidance throughout the course of the investigation. He also wishes to thank Dr. SAUL KAPLUN for many invaluable suggestions. Dr. KAPLUN's deep understanding of the nature of asymptotic expansions was of decisive help to the author in analyzing the fundamental aspects of the problem. Thanks are also due to Mrs. A. TINGLEY for her help in preparing the manuscript.

The research was supported in its initial stage by the Office of Naval Research, Contract Nonr-220(29), Project NR 041-156, and since November 1, 1958 by the Air Force Office of Scientific Research, Contract AF 49(638)-521.

\*\* Research Fellow in Aeronautics, California Institute of Technology.
