

Two Measures of Vorticity

C. TRUESDELL

Applied Mathematics Branch, Mechanics Division, Naval Research Laboratory, Washington, D.C.
and

Graduate Institute for Applied Mathematics, Indiana University, Bloomington, Indiana

In Memoriam P. F. NEMÉNYI

CONTENTS

1. Origin of the problem.....	174
2. The kinematical vorticity number \mathfrak{W}_K	175
3. Analogues.....	176
4. Alternative expressions for \mathfrak{W}_K	176
5. Motions with vorticity number unity.....	178
6. First example: flow in a rotating cylinder.....	180
7. Second example: Beltrami motions.....	181
8. Motions with steady vorticity number.....	183
9. The range of \mathfrak{W}_K in a motion in a finite domain.....	183
10. A general extremal theorem.....	184
11. The number \mathfrak{W}_K in a fluid motion.....	189
12. Third example: Gerstner's waves.....	190
13. The dynamical vorticity number \mathfrak{W}_D	192
14. Comparison of the significances of the two vorticity numbers.....	195
15. Fourth example: simple vortex.....	195
16. Fifth example: Couette flow.....	198
17. Sixth example: the rotation generated by a curved shock.....	201
