

*Singular Surfaces and Flow Lines
in the Theory of Plasticity*

T. Y. THOMAS

Graduate Institute for Applied Mathematics, Indiana University, Bloomington, Indiana

CONTENTS

1. Introduction	340
2. Propagation of waves	340
3. Singular surfaces	341
4. Kinematical conditions of compatibility	342
5. Variation in the derivatives of the density	344
6. Dynamical conditions of compatibility	345
7. Application to the von Mises plasticity equations	346
8. General dynamical conditions for singular surfaces	352
9. Origin of flow lines	355
10. Simple tension and compression	357
11. Approximation assumptions for singular surfaces in the plastic region	359
12. Some general relations for slip surfaces	361
13. Plane slip surfaces	364
14. Flat bar under tension	368
15. The slip cone	370
16. Transformation to cylindrical coordinates	372
17. Helicoidal slip surfaces	377

We wish to express our appreciation to Dr. G. R. IRWIN and Dr. H. M. TRENT of the Mechanics Division of the Naval Research Laboratory, Washington, D. C. for their interest in this work during preparation of the manuscript. Acknowledgment also is due to them as well as to Dr. ERICKSEN and Mr. KIES of the Mechanics Division for information on experimental data. We are indebted to Dr. DENNIS NEAD, a research assistant under Navy Contract, for making the drawings.

This paper was supported in part by Navy Contract N6onr-180, Task Order V, with Indiana University.
