

# *A New Series for the Calculation of Steady Laminar Boundary Layer Flows*

HENRY GÖRTLER

*Dedicated to ALBERT BETZ on his 70th birthday*

## CONTENTS

Summary.....	2
§ 1. Introduction: Statement of the problem and method of attack....	4
PART I: STUDY OF A BOUNDARY LAYER TRANSFORMATION	
§ 2. Transformation of the boundary layer equations.....	7
§ 3. Some useful relations.....	11
§ 4. Series expansions of the outer velocity $U(x)$ and of the principal function $\beta(\xi)$ , and their relations.....	12
§ 5. Special case of the constant principal function $\beta(\xi) = \beta_0$ and similar solutions of the boundary layer equations.....	22
§ 6. Boundary layers around cylinders in yaw.....	24
§ 7. Related transformations in the literature.....	25
PART II: THE NEW SERIES	
§ 8. Boundary layer series corresponding to principal functions of Class I	29
§ 9. Boundary layer series corresponding to principal functions of the more general Class II.....	35
§10. Remarks concerning the available tables of universal functions...	38
PART III: SOME APPLICATIONS OF THE NEW SERIES	
§11. Short description of the numerical work necessary for any application of the new series.....	40
